

Hawley Retainer

THE WORKHORSE APPLIANCE

TECHNICAL BULLETIN

One of the most versatile ortho appliances today is the Hawley retainer. Its primary role is to retain the arch after orthodontic treatment, however in recent years it has taken on additional duties. Johns Dental put this technical bulletin together to demonstrate the additional benefits the Hawley offers.

Anterior Coverage

Hawley with anterior coverage

Hawley with "C" Clasps

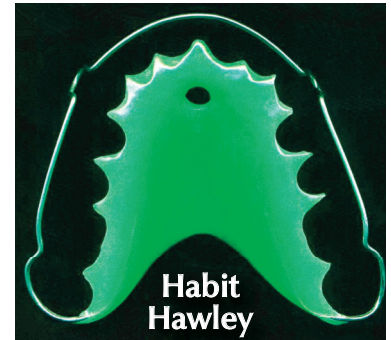

Anterior Springs

This Hawley uses anterior springs and occlusal coverage to improve a smile.

QCM Bow

The QCM Bow from Johns Dental offers an adjustable loop and a less abrasive surface. Patients of all ages will like the fact that they can maintain their smile while concealing the appliance.

Habit Hawley

A Hawley with habit hole is a simple option to keep patients with poor oral habits distracted.

Hawley Retainer

THE WORKHORSE APPLIANCE

TECHNICAL BULLETIN

Finish your cases with quality hawleys that fit right the first time!

Hawley or flipper with optional tooth

Many standard Hawleys from Johns Dental can be fabricated in 3 days. Just request a "3-Day Hawley" on your prescription. Also be sure to include your "in-hands" date. *Spring retainers and Hawleys with reset teeth will take additional time.*

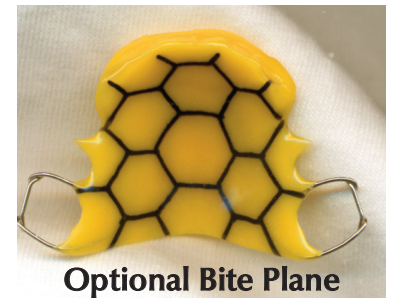

Spring Retainer

The Spring Retainer from Johns Dental is a great option for minor tooth movement. It is also a popular choice among adult patients.

Baker Hawley

The Baker Hawley uses a labial bend-back on upper and lateral incisors in order to control tooth position. This Hawley also offers tongue-bead habit options.

Optional Bite Plane

Hawley with optional bite plane was designed to hold the mandible forward. This is also known to many as a "Phase II Twin Block."

All Hawleys are proudly made in the USA ... and only with FDA approved materials.
